

Let us
bring your
dreams to
life...

J. F. Kruse Jewelers' Custom Design Process

Step Two: Once you approve the computer image, our expert wax carvers build a three dimensional model of your piece for you to hold and touch. This wax can be carved by hand, but for more intricate designs we use a jewelry CAD/CAM program.

Step Two: Wax Carving

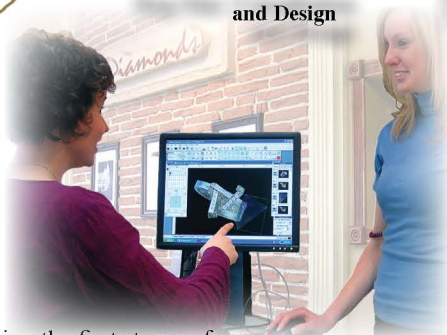

Step Four: After our certified gemologists hand-select the diamonds and gemstones needed for your design, our goldsmiths set each one into the metal. Then they buff and polish the piece to give it a brilliant shine!

Step Four: The Final Touches

Step One: Consultation and Design

Step One: During the first stages of your design, our staff helps you come up with several ideas while keeping in mind your lifestyle and budget. Your piece comes alive on a computer screen with our Digital Goldsmith Software.

Step Three: Casting into Metal

Step Three: After approving the wax, our expert goldsmiths conduct the difficult process of pouring the precious metal into the mold of your piece. Then they polish the rough casting of your design.

Step Five: Your Finished Design

Step Five: Now your piece is ready to wear!

At J. F. Kruse Jewelers, we want you to be very comfortable with the custom design process. From start to finish, we will make sure that you absolutely love your piece!
